never been so easy*

# 9000K

## Security Alarm Emergency Response

The Expander 9000K is your primary response to a break and enter or personal emergency. This fully portable, wireless security system is ideal for just about anywhere, such as the home, office, cottage or boat. Simply plug the 9000K into a standard wall plug and it is ready to protect you and your loved ones.

### Dual Detection System

The 9000K base system includes two powerful methods for detecting a break and enter. A Volumetric Air Pressure (VAP) sensor detects a forced entry through exterior doors and windows. With your VAP sensor armed and adjusted to suit your premises, anyone opening your exterior doors or breaking through an exterior window will initiate the 9000K's ear-piercing siren. Its second detection system is a built-in infrared motion detector for interior detection. With a detection field of 35 ft. x 156°, this motion detector is capable of protecting large areas.

### System Flexibility And Safety Enhancing Features

To customize the system to your home and lifestyle, VAP sensitivity is adjustable. Furthermore, bypass buttons allow you to choose which detection system you wish to arm.

A flashing alarm light, Braille imprint and LED displays on all command keys make the 9000K ideal for the visually and hearing impaired. Ease-of-use features include a user-programmable security access code, a softly backlit keypad, and an 8-hour rechargeable

back-up battery in the event of a power outage.

Also included in the 9000K base system are panic buttons for fire, medical and police. Upgrade your 9000K to include optional 24-hour emergency monitoring, and these panic buttons provide you with a quick response to a personal emergency.

### Easy System Expansion

In addition to the monitoring upgrade, the 9000K is expandable to include remote motion detectors, door and window contacts, smoke detector, and a medical panic pendant and panic wand. Each additional feature is conveniently added to the 9000K without the need for wiring, due to Expander's unique plug-in modules. Simply plug the new feature into the module port on your 9000K.

The Expander 9000K is more than a burglar alarm. It's a complete home emergency response system providing you and your loved ones with peace of mind in an increasingly unsafe world.

- Fully wireless and self-contained
- 120 db ear-piercing siren
- VAP sensor
- Built-in motion detector
- 24-hour emergency monitoring
- Programmable security access code
- Remote motion detectors and contacts
- Remote smoke detector
- Panic pendant and panic buttons
- Lower insurance premiums
